

”Multiple parenting” er en paralleldiagnosticering som WHO kun anbefaler til 2 diagnoser som supplerer hinanden.

ME G93.3 og FL-diagnosen ”almen træthed” udelukker gensidigt hinanden og derfor er ”multiple parenting” ikke et begreb der kan anvendes her.

Ifølge Ifølge WHO må der ikke anvendes 2 koder for samme sygdom/symptomer:

F.eks. udelukker ME G93.3 – ifølge WHO - diagnoser som MG22 træthed og Neurasteni F48. ME er ikke bare ”træthed”.

The screenshot shows the ICD-11 (Mortality and Morbidity Statistics) website. The main header is orange and contains the text "ICD-11 (Mortality and Morbidity Statistics)" on the left and "[ Register ] | [ Log In ]" and "Last Update: Oct 23" on the right. Below the header is a search bar and navigation tabs: "Foundation", "Linearizations", "Contributions", and "Info". The main content area is divided into two columns. The left column shows a tree view of ICD-11 categories, with "8E49 Postviral fatigue syndrome" selected. The right column displays the details for "8E49 Postviral fatigue syndrome", including its parent category "Other disorders of the nervous system", inclusions (Benign myalgic encephalomyelitis, chronic fatigue syndrome), and exclusions (Fatigue (MG22)). A "Caveats" section is visible at the bottom right of the page.
